## TECHNICAL INFORMATION

### Epoxy

The pigmented epoxy/polyester powder coating is baked between 150 and 220°C which transforms it to a resistant and protective film.

This environmentally friendly technology does not use heavy metals nor TGIC powder coatings. Moreover this coating is shock-resistant, non-corrosive and resistant to UV rays.

### Laminate

Laminate is made of a decorative paper and layers of kraft paper impregnated with phenolic resin. 0,8 mm thick, it is bonded on a chipboard or MDF core.

Laminate is very shock-resistant and has a high scratch resistance.

Supports are PEFC quality and classified E0.5.

### Compact laminate : thick self-supporting laminate for Xeos range only.

The compact laminate is made of layers of kraft paper according to thickness, impregnated with phenolic resin, 2 decorative papers and protective surfaces impregnated with melamine resin.

The compact laminate is particularly shock resistant, self-supporting and rot-proof.

### Melamine

Melamine faced boards are made of 2 decorative papers impregnated with melamine resin and of a chipboard or MDF core.

Good price/quality ratio. Supports are PEFC quality and classified E0.5.

### Varnish

The varnish is sprayed on the supports with 2 layers.

The varnish is made of an aqueous solution without solvent.

Slight colour differences between 2 fabrication can occur.

### Instructions for cleaning

Clean the product with a sponge, a soap and a rag. Wipe when finished. We advice to clean as soon as possible if there is a stain on the furniture.

### Do not use :

- abrasive or scratching products
- polishing products

### Use with care :

- solvents, detergent, bleach

If toxic, flammable, corrosive products are used, be sure to respect the security rules.

Always test a product on a non-apparent part of the furniture to be sure of its effect.
